

*All-in-one dry film laminator with cleaning unit and preheater***DH-7200P.J****DATA**

This machine is a semi-automatic dry-film laminator device and is an all-in-one device that includes a cleaning unit and a preheater (double).

Because it is an all-in-one device that includes a cleaning unit, there is no need for dust removal with a hand roller.

Once you place a board on the entry-side auxiliary table and manually advance it into the clean rollers, the machine will automatically perform the following series of tasks: “dust removal -> preheating -> lamination. The cleaning unit is a sliding movement type, allowing you to secure a wide working space when prearranging dry film.

The vertical motion strokes of the heat rollers and nip rollers have been designed to be large, making it easy to perform film setting.

* We provide a variety of heat rollers with different levels of rubber hardness and different materials.

* This device does not have a dry-film auto-cutting function.

<Simple Overview>

• Machine dimensions:	Approx. (W) 1470 x (D) 1280 x (H) 1820 mm
• Processing speed:	0.2 - 3 m/min
• Workpiece size width:	250 - 610 mm
• Supply voltage:	Supports various types
• Weight:	Approx. 700 kg
